

## CONSUMER GOODS

**Project Description** Stack-out displays for retail stores.

### Challenge

Client approached Lowe-Martin to design & create stack-outs for the high-traffic retail environment. The corrugate product being used was not durable enough for use in a demanding retail environment.

### Benefits & Solutions

Low-Martin produced a stack-out product that was much more durable but also interchangeable. The benefits to the client are:

- Each of the three main displays allows the client to utilize the same stack-out to display products that are different in shape, size and weight. This was made possible through the use of interchangeable inserts, labels and headers.
- More cost-effective than corrugate because stack-out longevity is extended. Fewer designs required (reducing production costs) due to component interchangeability.
- Much cleaner appearance ensuring product displays well on the stack-out.

### Production Specifications

Quantity: 2,000  
 Versions: 3 Stack Out Creatives, headers and inserts  
 Print: Labels and Headers on PS Vinyl  
 Finishing: Cut, cut-score and double-sided tape application

### Process

#### Pallet Version:

More than 70 lbs. - pallet required
